Taggo — Smart Mobility Platform

A technology-driven ride-hailing platform providing safe, affordable, and efficient transportation solutions across all 7 emirates of the UAE.

My Role

Solo Designer & Researcher — owned the full product design lifecycle from user research and competitive analysis through wireframing, visual design, prototyping, usability testing, design system creation, and developer handoff. Delivered 70+ production-ready screens with annotated specs.

RESPONSIBILITIES & TOOLS

UX Research · UI Design · Prototyping · Design System · Dev Handoff · Usability Testing · Competitive Analysis · Wireframing · Visual Design · Interaction Design

→ Figma (Design & Prototyping)
→ FigJam (Research & Mapping)
→ Maze (Usability Testing)
→ Notion (Documentation)

Problem & Solution

UAE commuters face unreliable ride-hailing with surge pricing and limited local payment options. Taggo solves this with transparent fixed-rate pricing, under 30-second booking, and full Arabic language support.

THE PROBLEM

Pain Points Identified

- Surge pricing creates distrust — riders avoid booking during peak hours
- Limited local payment options (no digital wallets, no cash toggle)
- No Arabic-first interface in competing apps
- Inconsistent driver quality with no transparent rating system
- No multi-service platform — separate apps needed for rides, rental, cargo

THE SOLUTION

Design Solutions

- Fixed-rate transparent pricing — fare shown before booking
- Digital wallet + cash + card payments with easy switching
- Full Arabic language & RTL layout support
- AI-powered driver matching with visible 4.8★ avg rating
- Unified platform — Ride, Rental, Cargo, VIP, Recovery in one app

Target Audience

Working professionals (40%), students (20%), tourists (15%), families (15%), and business travelers (10%). Over 10M urban commuters in UAE with 90% smartphone adoption and 85% digital payment usage.

USER SEGMENTS & RESEARCH

10M+	90%	85%
UAE Urban Commuters	Smartphone Adoption	Digital Payment Users

User Segments

40% Working Professionals — daily commute, airport, meetings
20% Students — budget-conscious, campus-to-city
15% Tourists — airport transfers, city exploration
15% Families — school runs, weekend outings
10% Business Travelers — VIP service, corporate accounts

Research Methods

→ User interviews (25 participants across 4 emirates)
→ Competitive analysis (Uber, Careem, Abu Dhabi Taxi)
→ Contextual inquiry at Dubai & Abu Dhabi airports
→ Card sorting for information architecture
→ Usability testing (3 rounds, 15 participants)
