Design System

A comprehensive token-based design system built from the ground up — with color primitives, semantic tokens, typography scale, spacing, radius, and sizing variables supporting light/dark themes.

92
Design Tokens
Variables across 6 collections

6
Token Collections
Primitives, Color, Typography, Spacing, Radiu

11
Core Components
Navbar, Footer, Sidebar, Banners

2
Theme Modes
Light & Dark mode support

Token Architecture

Primitives (30 tokens)
Base color palette — raw color definitions forming the foundation of the entire color system.

Color (15 tokens)
Semantic tokens with Light/Dark mode — maps primitives to primary, surface, text, and feedback colors.

Typography (15 tokens)
Type scale covering font sizes, line heights, and weights for consistent text hierarchy.

Spacing (6 tokens)
Padding, margins, gaps — consistent rhythm and breathing room across all layouts.

Radius (5 tokens)
Border radius from subtle rounding to pill shapes — standardized corner treatments.

Sizing (21 tokens)
Icon, button, input, and container sizes — consistent interactive targets.

Core Components

Floating Navbar
Primary navigation with floating design pattern — used across all public-facing pages.

Footer (2 variants)
Standard and compact footer variants for different page contexts.

Sidebar Navigation
Dashboard sidebar for clinic, admin, and doctor portals with role-based menus.

Ad Banner System
5 contextual banner variants — clinic discovery, featured, specialist, UAE healthcare, insurance.

Booking Flow Components
Step-by-step booking: service, doctor, date/time, details, review, payment.

Form & Input Patterns
Consistent form patterns with validation states and error handling.

Design Decisions

Key Principles

- Token-first approach: All visual properties reference variables, enabling theme switching and scalability
- Light/Dark mode built into the color token layer — semantic tokens auto-resolve per theme
- RTL-ready: Layout and component architecture supports bidirectional text (Arabic)
- Accessibility-first: Focus states, keyboard navigation specs, and contrast ratios documented
- Modular component architecture designed for composition and reuse across portals
